

KLEEN-UP

Frequently Asked Questions

- Q. With all the cleaners on the market, why should I switch to **KLEEN-UP**?
- A. Unlike other cleaners, **KLEEN-UP** is a daily cleaner used in a mop bucket or automatic scrubber at only 1 oz. per gallon cold water. It will leave behind a protective film that will increase the shine of the floor or floor finish. The protective film will also trap dirt from getting into the floor or floor finish helping eliminate the need for future stripping. **KLEEN-UP** is designed so that the dirt separates in the water giving you constant clean water to mop on your floor.
- Q. How often should I use **KLEEN-UP**?
- A. **KLEEN-UP** is designed to be the only cleaner you will need for mopping, automatic scrubbing and restoring if and when necessary.
- Q. When I use **KLEEN-UP** for the first time how do I know if it will remove ground-in dirt so I don't have to strip the floor?
- A. To evaluate how **KLEEN-UP** will work for you. Fill an empty quart bottle 3/4 with cold water, be sure bottle is labeled **Zing KLEEN-UP**. Add 4 oz. **Zing KLEEN-UP** to bottle. Adjust sprayer to a mist and spray an area of the floor you want to restore. Allow chemical to sit 2-3 minutes and using the center of a standard black strip pad rub area you applied **KLEEN-UP**. Pick an area that is out of the way. The **KLEEN-UP** will pull dirt from the finish. 90% of all situations can be fixed with **KLEEN-UP** without having to strip the floor.
- Q. We strip our floors annually. If we start using **KLEEN-UP** can we stop stripping our floors.
- A. As long as you have a solid, clean base and you maintain the floor with **KLEEN-UP** you should not have to strip your floors.
- Q. What is the best floor pad to use with **KLEEN-UP**?
- A. Until recently we exclusively recommended a medium grade hair pad for automatic scrubbers. They still work great. We have been working with great results the **Blue Blend Burnish Pad by Americo**. If you plan on restoring your floor then use the **Blue Blend Burnish** pad or **Standard Black Strip Pad**.

Q. What happens if I use **KLEEN-UP** with hot water?

A. Use of hot water with any cleaner can soften the finish that is present on the floor. This can cause the finish to wear easily and to dull the shine.

Q. What are the best way to clean the edges.

A. Use **Zing KLEEN-UP**. Fill an empty quart spray bottle labeled **Zing KLEEN-UP** 3/4 full with cold water. Add 4 oz. **KLEEN-UP** to fill the bottle. Spray **KLEEN-UP** along the edge and allow to sit 2-3 minutes then run low-speed side to side machine equipped with standard black strip pad. Most floor machines run counter-clockwise so walk machine backwards along the edge so you can add pressure as you clean. If floor machine is not available, use a doodlebug with a standard black strip pad to scrub edges.

Q. How do I eliminate powdering when burnishing?

A. Each time you use **Zing KLEEN-UP** you are applying a protective film (**Synchro-brite**) that will protect and shine your floor. If you burnish after cleaning with **KLEEN-UP** you will get no powdering since you are burnishing the protected film that doesn't powder.

If burnishing is done at a different time then fill an empty quart spray bottle labeled **Zing KLEEN-UP** 3/4 full with cold water. Add 4 oz. **KLEEN-UP** to fill the bottle. Spray **KLEEN-UP** very 12 -15 steps as you walk machine forward. Use High Speed Burnisher Equipped with Medium Grade Hair Pad or **Americo Blue Blend Burnish pad**.

Q. How far does a gallon of **Zing Floor Finish** cover?

A. One gallon **Zing First Impression Coating** or **Zing Ultra Reflections Floor Finish** will cover 2,000 sq. ft. Per gallon being applied with a string mop, 2,500 sq. ft. When applied With a microfiber flat mop and 5,000 sq. ft. When diluted 50/50 with water.

Q. Is it necessary to burnish **Zing KLEEN-UP** to produce a shine?

A. No. The protective film (**Synchro-brite**) that is left behind when cleaning automatically shines and protects. Burnishing will remove any scuffs or scratches and will increase the shine even more.

Q. I use **KLEEN-UP** daily to wash my floors, besides cleaning it leaves a great shine. We are about to add another coat of finish to the floor. How should I use the **KLEEN-UP**?

A. Follow the **Spray Clean Method**. Fill empty quart spray bottle labels **KLEEN-UP** and fill 3/4 with cold water and add 4 oz. **KLEEN-UP**. Use **Americo Blue Blend Burnish pad** or **Standard Black Strip pad** on a high speed burnisher and spray **KLEEN-UP** 2 sprays every 2 steps you walk forward. You will remove dead finish and dirt and leave the floor ready for floor finish application.

Q. How can I repair my floor or clean my floor before re-coating if I don't have a high speed burnisher?

A. Use low speed side to side machine or automatic scrubber equipped with **Americo Blue Blend Burnish pad** or **Standard Black Strip pad**. Dilute 6 oz. **Zing KLEEN-UP** per gallon of cold water in a mop bucket or automatic scrubber. **If using scrubber, follow double scrub method to clean floor.** Rinse with **Zing KLEEN-UP** measured 1 oz. per gallon cold water. Apply floor finish coats until desired result.

Q. Why do I need to **spray clean** my floor before applying finish?

A. Even if you wash your floor daily. Spray cleaning with **KLEEN-UP** will remove any dead finish on top and any dirt that may have penetrated into the finish. If you skip spray cleaning first, you will cover over any dirt that may be present. Keep this up and you eventually may need to strip your floor.
